Graduation Project:

- **Diet Recommendation System** – AI-Powered Personalized Nutrition Planner
- **Description:** Developed a full-stack web application that generates personalized diet plans and custom food recommendations based on individual health metrics and nutritional preferences. Implemented K-Nearest Neighbors (KNN) with cosine similarity for intelligent meal matching, and content-based filtering to tailor recommendations to user dietary goals. Built with Streamlit for the frontend, FastAPI for the backend, and Scikit-learn for machine learning, containerized using Docker for consistent deployment. The system features BMI calculation, calorie estimation, nutritional visualization, training recommendations, and ingredient-based filtering across a dataset of 270,000+ recipes.
